# Raspberry Pi Insider

A complete GPIO newbie!

Absolutely the worst person to give this talk!

# What is the Raspberry Pi?

# What is the Raspberry Pi?

*“The Raspberry Pi is a series of credit card-sized single-board computers developed in the United Kingdom by the Raspberry Pi Foundation to promote the teaching of basic computer science in schools and in developing countries.”*

- Wikipedia

# The Raspberry Pi line-up?

- Raspberry Pi Model A 1 & 1+
  - Old and crusty
  - \$20 - \$25
- Raspberry Pi Model B 1, 1+, 2 & 3
  - New hotness!
  - \$25 - \$35
- Raspberry Pi Compute Module 1 & 3
  - Specialist
- Raspberry Pi Zero
  - Adorable
  - \$5

# Which Raspberry Pi to buy?

- Raspberry Pi Model A 1 & 1+
  - Old and crusty
  - \$20 - \$25
- Raspberry Pi Model B 1, 1+, 2 & **3**
  - New hotness!
  - \$25 - \$35
- Raspberry Pi Compute Module 1 & 3
  - Specialist
- Raspberry Pi Zero
  - Adorable
  - \$5

# What do you get for \$35?

- Broadcom BCM2837 ARMv8-A (64/32-bit)
  - 1.2 GHz 64-bit quad-core ARM Cortex-A53
  - 1 GB RAM (shared with GPU)
- Broadcom VideoCore IV GPU
  - OpenGL ES 2.0
  - H.264/MPEG-4 decoder and encoder
  - HDMI 1.3
- 4× USB 2.0 ports & 1× 10/100 Ethernet port
- 2.4 GHz WiFi 802.11n & Bluetooth 4.1
- 15-pin MIPI camera interface (CSI) connector
- 17× GPIO

# What are GPIOs?

- **General Purpose Input-Output connector**
- 40-pin GPIO header on the Raspberry Pi
- Enables the connection and control of electronic components with a program.

# 40-pin GPIO header

USB Ports

# Physical computing kits

- Ben Nuttal recommends CamJam Edu Kits
  - Joint venture between The Pi Hut and the Cambridge Raspberry Jam
  - <https://thepihut.com/collections/camjam-edukit>

*“Low-cost way to introduce kids (and adults!) to the world of electronics and programming.”*

# What is GPIO Zero?

*“A simple interface to everyday GPIO components used with Raspberry Pi.”*

- Ben Nuttal

# Why GPIO Zero?

- Python
  - The preferred language of the Raspberry Pi Foundation
- GPIO was complex
  - Connecting electronics required lots of code just to get set up
- GPIO Zero handles the boilerplate for you
  - You focus on controlling the physical devices
  - Fewer lines of code
  - Easier for newcomers to understand
- GPIO Zero uses Broadcom (BCM) pin numbering
  - As opposed to physical (BOARD) numbering

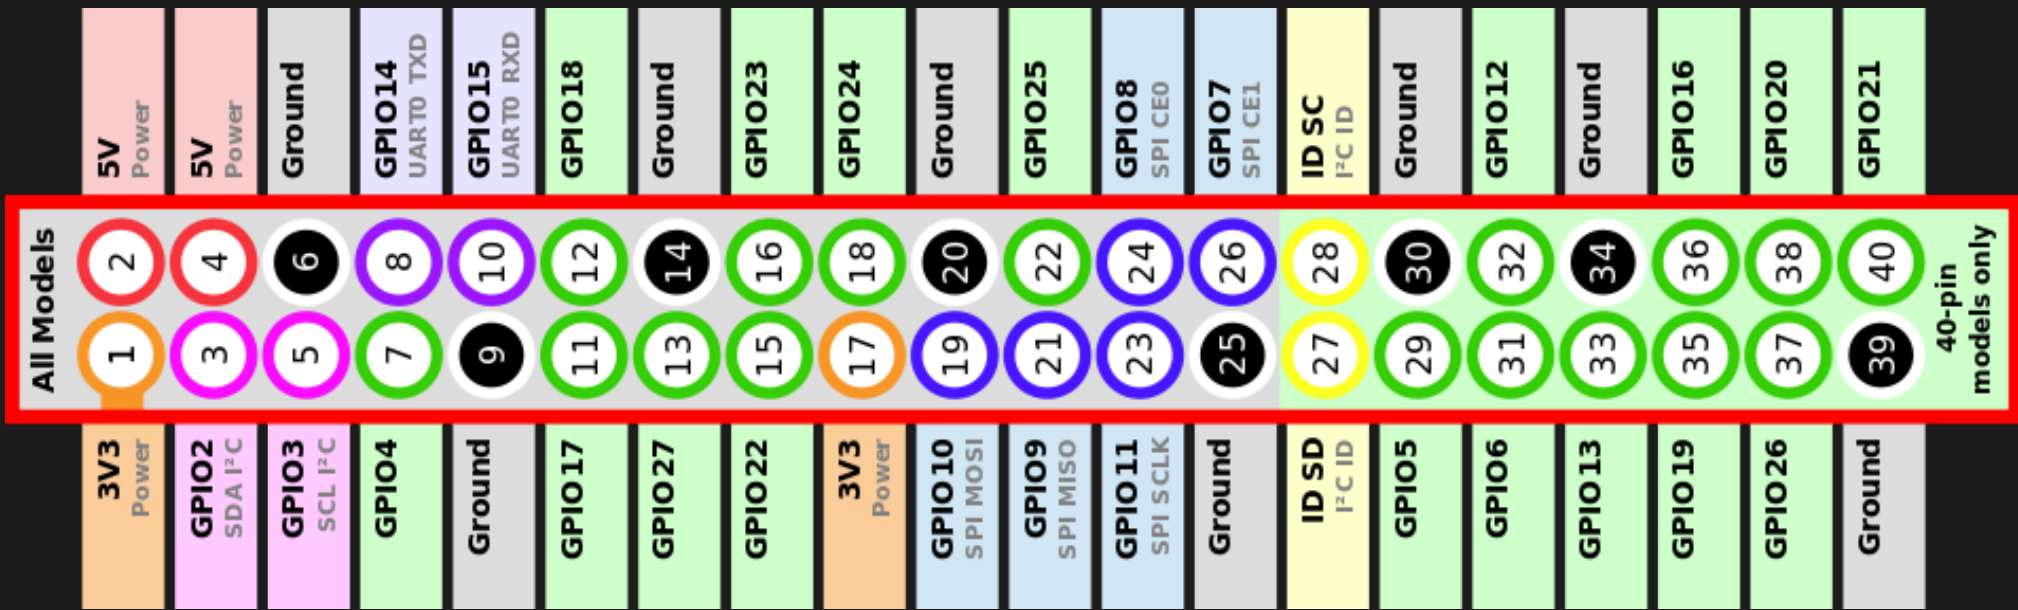

# BCM vs BOARD numbering

*“The BCM numbering bears no relation to their actual position on the Raspberry Pi GPIO header!”*

- Tim Cox

# 40-pin GPIO header

# GPIO examples

- You will need:
  - A Raspberry Pi
  - SD card of “Raspbian Jessie with PIXEL”
    - <https://www.raspberrypi.org/downloads/raspbian/>
  - Power supply
  - Monitor
  - A keyboard and mouse
  - Python3

# Turn a LED on and off repeatedly

```
from gpiozero import LED
from time import sleep
```

```
red = LED(17)
```

```
while True:
```

```
    red.on()
```

```
    sleep(1)
```

```
    red.off()
```

```
    sleep(1)
```

# Check if a Button is pressed

```
from gpiozero import Button
```

```
button = Button(2)
```

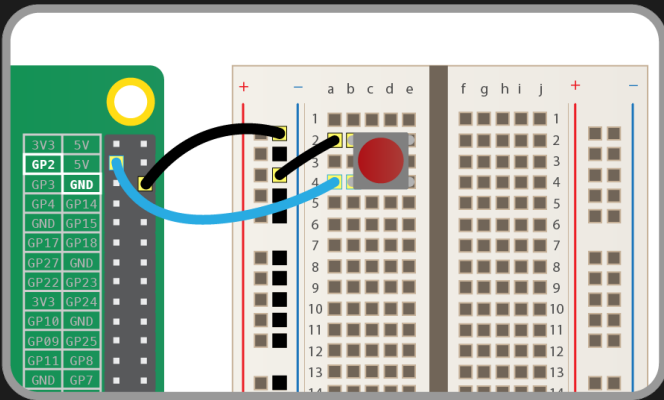

```
while True:
```

```
    if button.is_pressed:
```

```
        print("Button is pressed")
```

```
    else:
```

```
        print("Button is not pressed")
```

# Button controlled LED

```
from gpiozero import LED, Button
from signal import pause
```

```
led = LED(17)
```

```
button = Button(2)
```

```
button.when_pressed = led.on
```

```
button.when_released = led.off
```

```
pause()
```

# Button controlled LED

```
from gpiozero import LED, Button
from signal import pause
```

```
led = LED(17)
```

```
button = Button(2)
```

```
led.source = button.values
```

```
pause()
```

# Button controlled LED

```
from gpiozero import LED, Button  
from signal import pause
```

```
led = LED(17)
```

```
button = Button(2)
```

```
led.source = button.values
```

```
pause()
```

# Button controlled camera

```
from gpiozero import Button
from picamera import PiCamera
from datetime import datetime
from signal import pause
```

```
button = Button(2)
camera = PiCamera()
```

```
def capture():
    datetime = datetime.now().isoformat()
    camera.capture('/home/pi/%s.jpg' % datetime)
```

```
button.when_pressed = capture
```

```
pause()
```

# Motion detector

```
from gpiozero import MotionSensor, LED  
from signal import pause
```

```
pir = MotionSensor(4)
```

```
led = LED(16)
```

```
pir.when_motion = led.on
```

```
pir.when_no_motion = led.off
```

```
pause()
```

# Distance detector

```
from gpiozero import DistanceSensor  
from time import sleep
```

```
sensor = DistanceSensor(23, 24)
```

```
while True:
```

```
    print('Distance to nearest object  
is', sensor.distance, 'm')
```

```
    sleep(1)
```

# What can GPIO control?

- Input devices

- Button
- Line Sensor (TRCT5000)
- Motion Sensor (D-SUN PIR)
- Light Sensor (LDR)
- Distance Sensor (HC-SR04)
- DigitalInputDevice
- SmoothedInputDevice

- Output devices

- LED
- PWMLED
- RGBLED
- Buzzer
- Motor
- Servo
- AngularServo
- DigitalOutputDevice
- PWMOutputDevice

# What can GPIO control?

- LEDBoard
- LEDBarGraph
- ButtonBoard
- TrafficLights
- LedBorg
- PiLITEr
- PiLITEr Bar Graph
- PI-TRAFFIC
- TrafficLightsBuzzer
- Fish Dish
- Traffic HAT
- Robot
- Ryanteck MCB Robot
- CamJam #3 Kit Robot
- Energenie
- SnowPi

# Summary

The Raspberry Pi 3 is a small inexpensive computer

General Purpose Input-Output enables the connection and control of electronic components with a program.

CamJam Edu Kits are great for newcomers

GPIO Zero is a simple interface for GPIO components used with Raspberry Pi.

Lots of GPIO Zero documentation and tutorials
